PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/521,399

Applicant(s)

ORSCHULIK, GUNTER

Examiner

Kristen C. Hayes

Art Unit

3643

Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 01 February 2008.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,3,5-8,10-15 and 18-24 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,3,5-8,10-15 and 18-24 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/06)
- 4) ☐ Interview Summary (PTO-413)
- 5) ☐ Paper No(s)/Mail Date _____
- 6) ☐ Other: _____

DETAILED ACTION***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 3, 5-7, 18-21, 23 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mickelson US Patent 3,949,524 in view of Grigi EP 0 842 599 and Anderson US 5,397,382.

Modified Figure 3, US Patent 3,949,524

Art Unit: 3643

obvious design choice. *In re Leshin*, 125 USPQ 416. Grigi teaches the pot (1) and coaster (3) being designed with a dome in the shape of a truncated cone with the pot and the coaster having abutting guide faces (Grigi, Figure: 1). The pot and coaster both being designed with a dome would allow the domes to be concentrically aligned. The concentric fit of the domes would aid in providing a secure connection between the pot and the coaster. Also, this alignment would ensure that the coaster was directly under the pot, which would aid it in catching water draining from the pot. Anderson teaches a bayonet-type coupling connection connecting a pot and coaster (Anderson, column 9: lines 57-59). Bayonet-type couplings are extremely well known in the art to provide quick secure but quickly releasable connections. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the pot of Mickelson with the bayonet fitting of Anderson and the dome of Grigi as discussed above.

4. Regarding claim 3, Mickelson as modified by Grigi and Anderson discloses a device with the limitations of claim 2 but does not disclose the dome being provided with the coupling elements. Grigi teaches a dome (21) provided with coupling elements (23). The coupling elements being on the dome would allow for alignment of the coaster with respect to the pot. The location of the coupling elements would simplify the mating of the elements. If the coupling elements were in different locations throughout the device they would be more difficult to align and would complicate the device. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the position of the coupling elements of Mickelson with the position of the coupling elements of Grigi in order to simplify the mating of the elements.

5. Regarding claims 5 and 21, Mickelson as modified by Grigi and Anderson discloses a device with the limitations of claim 4 and further discloses the coupling elements being designed in the form of hooks on the coaster and holes in the wall of the pot (Mickelson, Figure: 2).

Art Unit: 3643

6. Regarding claim 6, Mickelson as modified Grigi and Anderson discloses a device with the limitations of claim 5. Mickelson further discloses openings (18) provided on an end face of the dome of the pot with hooks engaging in these openings in a coupling engagement with mutual rotation (Mickelson, column 3: lines 6-9). Mickelson does not disclose the hooks protruding upward on an end face of the dome of the coaster. However, Grigi teaches the hooks being designed so that they protrude upward on an end face (100) of the dome of the coaster. It would require more effort to disengage the pot with the coaster with the hooks protruding upward than on an end face. The device would not only require a rotational movement, but also a lifting or thrusting movement for the hooks to clear the openings thereby disengaging the pot from the coaster. This would ensure that the pot did not become disengaged from the coaster accidentally. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the position of the hooks of Mickelson with the position of the hooks of Grigi to ensure that the pot did not become disengaged from the coaster accidentally.

7. Regarding claim 7, Mickelson as modified by Grigi and Anderson discloses a device with the limitations of claim 6. Mickelson as modified further discloses the hooks having a hook mouth (101) pointing in the radial direction on at least on side.

8. Regarding claim 18, Mickelson as modified by Grigi and Anderson discloses a device with the limitations of claim 1 wherein the coupling elements are secured by catch elements (Mickelson, column 3: lines 36-39).

9. Regarding claim 19, Mickelson as modified by Grigi and Anderson discloses a device with the limitations of claim 1 but does not disclose the dome protruding upward above an edge of the coaster. However, Grigi teaches the dome protruding upwards above an edge of the coaster (Grigi, Figure: 1). The dome protruding upwards above an edge of the coaster would ensure the dome was deeply located within the pot. This would increase the stability of the

Art Unit: 3643

device, preventing it from tipping over. The dome protruding upwards above an edge of the coaster, and therefore above the joining seam of the pot and coaster would also prevent the pot being torn away from the coaster along the seam. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the dome of the device of Mickelson with the dome extending upwards above an edge of the coaster as taught by Grigi to ensure that the device was not tipped over or torn along the joining seam.

10. Regarding claim 20, Mickelson as modified by Grigi and Anderson discloses a device with the limitations of claim 1 but does not disclose a spacer element. However, Grigi teaches a coaster having a spacer element (8) with respect to the pot. Spacers are well known in the art to create a space between a pot and coaster, allowing for the pot to serve as a reservoir or to aid aeration of the roots. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the coaster of Mickelson with the spacer elements as taught by Grigi to aid in the aeration of roots and to act as a reservoir.

11. Claims 8, 10-12 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mickelson US Patent 3,949,524 in view of Grigi EP 0 842 599 and Anderson US 5,397,382 as applied to claims 1, 3, 5-7, 18-21, 23 and 24 above, and further in view of Wells US Patent 1,391,353.

12. Regarding claims 8 and 22, Mickelson as modified by Grigi and Anderson discloses a device with the limitations of claim 7 but do not disclose the openings that narrow as in the shape of a keyhole. However, Wells teaches an opening (7) which has a width that narrows in the direction of rotation in the manner of a keyhole (Wells, page 1: lines 85-87). The keyhole shape of the opening would ensure that the opening and the hook did not become easily realigned, which would separate the pot and coaster. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the opening of Mickelson as

Art Unit: 3643

modified by Grigi and Anderson with the keyhole shape of Wells to complicate the alignment of the opening and hook, thereby reducing the chances of the pot and coaster accidentally separating.

13. Regarding claim 10, Mickelson as modified by Grigi, Anderson and Wells further discloses the coupling elements being secured by catch elements (Mickelson, column 3: lines 36-39).

14. Regarding claim 11, Mickelson as modified by Grigi, Anderson and Wells discloses a device with the limitations of claim 10. Mickelson does not disclose the dome protruding upwards above an edge of the coaster. Grigi teaches the dome protruding upwards above an edge of the coaster (Grigi, Figure: 1). The dome protruding upwards above an edge of the coaster would ensure the dome was deeply located within the pot. This would increase the stability of the device, preventing it from tipping over. The dome protruding upwards above an edge of the coaster, and therefore above the joining seam of the pot and coaster would also prevent the pot being torn away from the coaster along the seam. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the dome of the device of Mickelson, as modified, with the dome extending upwards above an edge of the coaster as taught by Grigi to ensure that the device was not tipped over or torn along the joining seam.

15. Regarding claim 12, Mickelson as modified by Grigi, Anderson and Wells discloses a device with the limitations of claim 11. Mickelson does not disclose the coaster provided with a spacer. However, Grigi teaches the coaster provided with a spacer (8) element with respect to the pot. Spacers are well known in the art to create space between pots and coasters, allowing the space to act as a reservoir for water or air. Therefore, it would have been obvious to one of

Art Unit: 3643

ordinary skill in the art at the time of the invention to modify the device of Mickelson, as modified, with spacers of Grigi to provide a reservoir and aeration for the pot.

16. Claims 13-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mickelson US Patent 3,949,524 in view of Grigi EP 0 842 599, Anderson US 5,397,382 and Wells US Patent 1,391,353 as applied to claims 8-12 above, and further in view of Kay et al US Patent 4,315,382.

17. Regarding claims 13 and 14, Mickelson as modified by Grigi, Anderson and Wells discloses a device with the limitations of claim 12 but do not disclose the spacer element being a ring or including a row of interrupted ring sections. However, Kay teaches the spacer element being designed in an interrupted ring shape in the coaster (Kay, Figure: 3), as is known in the art. The spacer being in the shape of a ring or interrupted ring would provide spacers to a large area of the pot, ensuring that the space was uniform. If the spacer was not evenly distributed the position of the pot within the coaster would be tilted, which would decrease the stability of the device. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the device of Mickelson as modified by Grigi, Anderson and Wells with the spacer in the shape of an interrupted ring of Kay to ensure the stability of the device.

18. Regarding claim 15, Mickelson in view of Grigi, Anderson, Wells and Kay discloses a device with the limitations of claim 13. Kay teaches the spacer element including an interrupted hollow rib (Kay, Figures: 3, 4), with its hollow space being subdivided by at least one web (54). The hollow rib would be formed by molding, a process well known in the art and also taught by Kay (column 4: lines 41-44), to create pots and coasters. The manufacture of the device by molding would allow a large number of identical devices quickly and inexpensively. The hollow space of the rib being subdivided by a web is also well known in the art. The webs are used as additional spacers, or to prevent the devices from becoming locked together when stacked.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to make the rib of Kay hollow and to modify it with a web to prevent the devices from becoming locked together when stacked, as is known in the art.

Response to Arguments

19. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

1. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kristen C. Hayes whose telephone number is 571-270-3093. The examiner can normally be reached on Monday-Thursday, 7:00-5:00.

Art Unit: 3643

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Peter Poon can be reached on (571)272-6891. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
